

What are the Components of AI program

Discuss applications of AI.

Describe uncertainty and how it handle in AI

What is PAC learning

Explain Goal base Agent

Explain Knowledge base Agent

What are different types of Planning? Explain any two types with an example ?

Explain reinforcement learning in detail.

Explain iterative deepening algorithm and its performance measures

Explain PEAS representation with examples .

Explain A* algorithm in detail.

What is an adversarial search algorithm and a game playing algorithm described briefly?

Compare forward chaining and backward chaining

You are given two jugs, one with a capacity of 4 liters and another with a capacity of 3 liters. Both jugs are initially empty. There are no markings on the jugs to measure intermediate quantities. Using only the operations of filling a jug, emptying a jug, and pouring water from one jug to another until either the source jug is empty or the destination jug is full, how will you measure exactly 2 liters of water in either of the jugs?

Consider the following statements: a) Ravi likes all kind of food. b) Apple and chicken are food. c) If anyone eats and is not killed is food. d) Ajay eats peanuts and still alive. e) Rita eats everything that is food. Prove that Ravi likes Peanuts using resolution.

List out uninformed search algorithms and explain in detail Depth limited search algorithm and depth first search algorithm.

Explain four ways to measure performance of an AI algorithm.

Explain hill climbing algorithm in detail.

Define pruning? Explain alpha and beta pruning algorithm with an example

Wumpus world Environment

Differentiate between First order logic and propositional logic.

Represent KB in FOL

Explain Conditional Planning with an example.

Discuss partial order planning with example.

ugs are
e operations of
empty or the

Anything
Ajay eats.

oth limited
