

1	Diffie-Hellman key exchange Numericals				
2	RSA algorithm numericals.				
3	Any Example on playfair cipher and Hill cipher				
4	Compare SHA-1 and MD5				
5	Define Active and Passive Attacks.				
6	Define DDOS attack.				
7	Define Worms and Viruses.				
8	Difference between Monoalphabetic and Polyalphabetic substitution techniques.				
9	Difference between Substitution and Transposition techniques.				
10	Differentiate between Digital Certificate and Digital Signature.				
11	Differentiate between Virus and worm				
12	Discuss Goals of Security.				
13	Discuss IPSEC Protocol.				
14	Discuss Message Authentication protocol.				
15	Discuss the role of PGP (Pretty Good Privacy) in email security. What are its components?				
16	Discuss various attacks on Digital Signatures.				
17	Distinguish between HMAC and CMAC.				
18	Explain ARP Spoofing				
19	Explain Caesar cipher.				
20	Explain Cipher feedback and Output feedback mode of block cipher.				
21	Explain Cipher feedback mode of block cipher.				
22	Explain Data Encryption Standard algorithm.				
23	Explain Denial of service (DOS) attack.				
24	Explain DES algorithm in detail.				
25	Explain different types of Attack.				
26	Explain digital signature with a diagram.				
27	Explain ECB and CBC modes of block cipher.				
28	Explain Euclidean algorithm.				
29	Explain Kerberos. Why is it called as SSO?				
30	Explain MD5 algorithm in detail.				
31	Explain Monoalphabetic and Polyalphabetic substitution techniques.				
32	Explain Principles of Block Cipher.				
33	Explain RC4 stream cipher.				
34	Explain Security Goals.				
35	Explain SQL injection Attack.				
36	Explain Substitution and Transposition techniques.				
37	Explain types of Attacks.				
38	Explain Types of Firewall.				
39	Explain Vigenere cipher.				
40	Explain with examples Keyed and keyless transposition ciphers.				
41	Explain with examples Keyed and keyless transposition ciphers.				
42	List types of Authentication. Explain any one.				

43	List Types of computer viruses.				
44	List types of Malicious program.				
45	Use Hill cipher to encrypt the text "short". The key to be used is "Hill".				
46	What characteristics are needed in secure has function? Explain the				
47	What id nonce in key distribution scenario? Draw a neat diagram and				
48	What is need for message authrntication? List various techniques used for message authentication. Explain any one.				
49	Write a note on: ICMP flood attack.				
50	write a short note on: Packet Sniffing.				
51	Write short note on: Buffer Overflow.
