

Q.No .	Module	Questions
1	Module 1 Introduction to System Software	Differentiate between system software and application software.
2		List out the various system software
3		Define Application software.
4		Explain interpreter and Device Drivers example.
5		Define compiler and interpreter.
6		Explain the features of system software.
7		Define Loader and Linker
8		Differentiate between compiler and Interpreter.
9		Explain different types of Text editors.
10		State the goal of System software.
1	Module 2 Assemblers	Draw the flowchart of pass I of two pass assemblers.
2		Explain advanced assembly directives.
3		Explain forward reference problem
4		Draw a neat flow chart of pass-2 of two pass assembler design
5		Explain Declaration Statement? Give Example.
6		Discuss the element of assembly Language programming.
7		Explain advance assembly directives.
8		Explain Syntesis Phase in assembly scheme.
9		Explain databases used in Single pass assembler design with suitable example.
10		Numericals on Pass-I and Pass II of two pass assembler.
11		List the different types of errors that are handle by Pass I and Pass II of assembler.
1	Module 3 Macros and Macro Processor	Draw the flowchart of one pass macro processor.
2		Explain Macro and Macro expansion.
3		Explain different features of macro with example
4		Write short note on : Nested macro Facility.
5		Explain Positional Parameter.
6		Describe Macro Database
7		Draw Flowchart and Explain with database the working pass1 of macro processor
8		Explain with example conditional macro expansion.
9		Explain the working of Two-pass macro processor with neat flowchart.
10		Define Macro call with example.
1	Module 4 Loader and Linkers	Explain different functions of the loader.
2		Explain the design of a direct linking loader.
3		Discuss the fundamental process of a loader? Explain dynamic loading in detail.

4		Explain the relocation and linking concepts in loader
5		Explain absolute loader .State its advantage and disadvantage
6		Explain various functions of loader.Compare Linking Loader and Linkage editor.
7		Explain different types of Loader in details.
8		Explain the working of direct linking loader with example,showing the entries in different database built by DLL
9		Explain various functions of loader.Also explain the design and flowchart of Absolute loader.
10		Distinguish difference between Dynamic Loading Dynamic Linking explain with an example
1	Module 5 Compilers: Analysis Phase	Explain the different phases of the compiler. Illustrate all the output after each phase for the following statement: $a = b + C * 5$
2		Compare pattern, Lexeme and token with example
3		Differentiate Top-down and Bottom up parsing techniques
4		List the advantages and disadvantages of operator precedence parsing.
5		Define a context free grammar.
6		Explain the process of elimination of left recursion with example.
7		Write short note on Syntax-directed definition
8		Numericals on Parser
1	Module 6 Compilers: Synthesis Phase	Explain different code optimization techniques with example
2		Write short note on peephole optimization
3		What is the need of Intermediate code generation? Explain any two Intermediate code generation forms with example
4		What is fundamental process of a loader? Explain dynamic loading in detail.
5		Explain with an example Quadruples, Triples, Infix to postfix.
6		Explain the concepts of basic blocks and flow graph with example the three - address code
7		Write short note on synthesized and Inherited attributes.
8		Numericals on Three address code .
9		Explain loop optimization techniques with example.
10		Explain the different issues in code generations.
11		Draw and explain DAG with example
