

Explain the role of heuristic function in A\* algorithm with example.

Describe reinforcement learning with suitable example.

Explain the structure and components of a knowledge base.

Differentiate between BFS and DFS.

Explain forward chaining and backward chaining with example.

Describe propositional logic with suitable examples.

Explain first order logic and its components.

Describe partial order planning in detail.

Explain conditional planning with example.

Describe unification process in AI with example.

Explain hill climbing algorithm with suitable example.

Describe alpha-beta pruning and its significance.

Explain different forms of learning in AI.

Describe knowledge-based agents with architecture.

Explain PAC learning model in AI.

Describe local search algorithms with examples.

Explain basics of natural language processing.

Describe belief networks with example.
